

Experienced Full-stack Software Engineer

Description

As an experienced full-stack software engineer you'll be involved in all aspects of creating an Enterprise SAAS solution: from architecture to infrastructure, from development to (automated) testing.

You'll be welcomed in a small & agile development team (6 devs) with complementary expertises, and you'll be joining on the core components from day one.

There are no levels of hierarchy: everybody in the development team is equal and we go to great lengths to make team collaboration as pleasant and effective as possible.

At Skedify, you'll mainly be working on conceptualising and developing new features and improvements of the core components. Not alone, but as a team. Peer review and testing are important to deliver quality as a team. We put a focus on solid, modular code with attention to both functional and technical evolutions.

Your skills

Technical skills

- Demonstrable experience
 - PHP (e.g. Laravel)
 - Node.JS
 - JavaScript (React/Preact, AngularJS)
 - MySQL
- Good insights into Software Architecture such as
 - General application architecture
 - REST principles
 - OO & Functional programming
 - Design patterns
- Familiar with Git

Skills to delight us with:

- Experience in Test Driven Development

- You've done projects in Laravel (or similar frameworks)
- Not afraid to use command line tools
- You're a fan of the "Boy Scout Rule"
- Experience with Continuous Integration (Jenkins, Travis, Teamcity, GitLab, ...) and provisioning tools
- You're familiar with Scrum principles and dream to work in an Agile team
- You've got a need for speed (and scalability), and have experience with New Relic

Personal skills

- You're driven by your passion for tech
- You're looking to have an impact on Skedify
- Growing your own and the team's expertise and skill set is constantly on your mind
- You're confident, but also modest
- You're analytic, but also pragmatic
- If you could, you'd automate everything into a single click

What we offer you?

- A recent technology stack (React, Node.js, Laravel, MySQL, AngularJS, Ansible, ...)
- The chance to work on a single product with different and challenging components, and to see your efforts grow and flourish over time
- A company transitioning from start-up to scale-up, but never corporate
- A position in a young, dynamic team (21-38y)
- An informal atmosphere, with open communication and a no bullshit attitude
- Working at an awesome location - Blaarmeersen / Watersportbaan - with easy access, parking and surrounded by nature
- Fun activities: ping-pong at the office, bowling, paintball, lunch-picnicking and kubb in the summer, beer o'clock, etc...
- Yummy coffee and fresh fruit baskets
- And of course, a competitive salary with many extra benefits such as meal vouchers, hospitalization insurance and others
