

Address innovation & transformation challenges

By co-creating our customer's future

To deliver lasting impact

## We solve complex business & technology dilemmas for our customers

Technology is ever evolving, and innovation is always around the corner. At Addestino, we stay on top of the latest evolutions and revolutions to provide our customers with the best possible solutions, be it in strategy, innovation or transformation

**Which business transformations require which technology?**

We guide our customers to the most applicable technologies for their use case, for example improving their processes or solving changing customer needs.

**Why are our investments not reflected in our profits?**

Addestino uncovers hidden pain points and money sinks in existing IT systems and R&D processes through an in-depth analysis, followed by redesign or optimization.

**How will technology disruptions impact our business?**

A new technology can completely change the playing field. We at Addestino help assess its impact and how to monetize it.

## We offer a personalized & accelerated growth trajectory to our consultants

### A personal approach

You determine your own growth direction/speed, as you are not a number in a large company. You will work in an environment of respect for the work-life (hours, location), with little hierarchy and a lot of contact with the Managing Partners.

### Various & challenging assignments

You get the opportunity to discover various sectors and different environments, while tackling complex challenges at the intersection of technology and business. Creating innovative products, transforming ICT landscapes, defining growth strategies...the choice is yours.

### Learning & growth

You join a team of 30 top engineers, where you learn from the best and work integrated in small teams mostly at the customer's site. You are supported by a mentor and benefit from excellent in-house trainings to grow as an individual and business professional.

## Some of our customer cases

- Defining a growth strategy for a high-tech visualization company
- Establishing a corporate venturing portfolio around IoT, AI, electrification... for autonomous driving cars
- Creating new products for collaboration in a connected world
- Transforming processes and supporting tools to improve customer experience and internal collaboration
- Reducing lead-times in critical business processes
- Applying AI technologies in advanced data science environments
- Rearchitecting and migrating legacy ICT landscapes to flexible cloud-based infrastructures and applications
- Identifying and addressing security issues in complex ICT landscapes...
