

# Be part of the energy transition!

Next Kraftwerke is a successful and innovative player in the European energy sector with the aim of enabling a 100% sustainable electricity system. From our office in Brussels we offer our customers in Belgium and the Netherlands advanced services in the field of renewable energy, smart networks, electricity trading and balancing of the electricity grid. In doing so, we support a large portfolio of electricity producers and consumers to exploit new opportunities in the rapidly changing energy market.

We are a dynamic team in the Benelux with the support of more than 100 colleagues in our other European offices. Do you want to be part of the expansion of our activities in an open, creative, informal and energetic working atmosphere? Do not hesitate and apply!

## For our office in Brussels we are looking for a full-time **Energy Expert (starters welcome, f/m)**

As Energy Expert you join our team in Brussels working on electricity market data analysis, connection of assets to our virtual power plant, settlement of control power activation and product development for reserve power provision and energy trading. You will also work on research and innovation projects. Depending on your knowledge and personal interest, your duties and responsibilities will evolve quickly.

### What you will be doing?

- Analysis of electricity and reserve power markets and their developments.
- Manage the integration of new assets into our virtual power plant including the management of the Next Box installation.
- Generate and document technical information in our knowledge database.
- Manage and support research and pilot projects.
- Assist in presentations of company products and services to current and potential clients.
- Supervision, follow-up and settlement of reserve power provision and activations.
- Account management, including outage handling of assets.
- Exchange proactively with our technicians, traders, and service team in Belgium and Germany.

### Who are you?

- You have a bachelor's degree or higher in a relevant field (preferably natural sciences or engineering).
- You have a fluent command of Dutch and French and you have a very good knowledge in English.
- You are a hands-on proactive problem-solver.
- You are not afraid of numbers...on the contrary!
- You are eager to learn, motivated and you have a strong interest in energy, in particular in renewables.
- You are comfortable with working by yourself and in a team.
- Basic knowledge in programming (e.g. VBA or Python) is an asset.

### What we are offering

In an enthusiastic team, you will contribute to a 100% renewable energy future with a competitive salary package for a full-time position. Being trained on the job you will learn about all aspects of flexibility on the control power and energy markets.

Want to strengthen our team? Apply through [this link](#) (including a motivation letter - in English or Dutch) before end of September 2019.
