Job Description

Senior Full-Stack Developer

In this role, you will contribute to the further development of Trendtracker, Trensition's AI-driven strategic intelligence platform. Through your proven expertise with software development, you ensure the continuous improvement and extension of our B2B SaaS solution for international corporations, fueled by emerging needs in our targeted markets and new developments within the domain of AI.

There is only 1 KPI that matters:

Build a SaaS solution that sets the international standard for AI-driven strategic intelligence.

This job opportunity requires taking ownership of and executing the following, non-exhaustive list of tasks:

- Contribute to project planning, including defining milestones and deliverables.
- Enforce code quality standards, best practices, and code reviews.
- Write unit, integration, and end-to-end tests, and debug and profile applications to identify and fix performance issues.
- Optimize database queries for performance and scalability.
- Handle data storage, retrieval, and processing.
- Application deployment, scaling, and maintenance.
- Create comprehensive documentation for code, APIs, and processes.
- Build awesome new features.

Professional characteristics required for this job opportunity include:

- Profound expertise with software development, especially SaaS within a B2B context.
- Extensive knowledge about and experience with Python, MongoDB, Elasticsearch, Angular, Kubernetes, Git, RESTful APIs, CI/CD, HTML, CSS, Javascript,
- Ability to solve complex technical challenges.
- Ability to collaborate with data engineers, data scientists & UX/UI designers.
- Ability to lead and mentor junior developers.
- Strong interest for and affinity with AI technology and big data.
- Experience with conveying complex information in a simplified manner.
- Ability to communicate fluently in English.
- Take ownership, set and prioritize goals.
