# AI Engineer Internship

**Duration: Minimum 8 weeks**

**Location: Gent, Dok Noord, (Kortrijk, Hangar K is also an option)**

## ABOUT US

We're Whitespace, a young and dynamic startup that loves building cool stuff! Our SaaS tool combines the power of AI and data-driven strategies to help small eCommerce businesses create high-quality video ads using AI, saving them tons of time and effort. We're on a mission to make marketing simpler and smarter.

## WHAT YOU'LL DO

This isn't your average internship. You'll be at the core of our product, building and improving end-to-end machine learning pipelines that power real marketing content. From working with LLMs to custom image generation models, you'll develop solutions that deliver real value to our users.

You'll learn how to deploy models on the Cloud, evaluate their performance, and improve them through iteration and real-world feedback. Everything you work on will go live in production, directly shaping our platform and user experience. You'll be guided every step of the way by our CTO, a seasoned machine learning expert, and gain hands-on experience with industry-standard tools and workflows, preparing you to build production-ready AI systems.

## KEY RESPONSIBILITIES

- Develop state-of-the-art machine learning pipelines using LLMs and custom image generation models.
- Deploy and optimize ML pipelines on the Cloud.
- Implement evaluation benchmarks to measure the quality and reliability of models.
- Collaborate with a young, dynamic team to integrate AI solutions into our platform.
- Test, iterate, and improve your models based on user feedback.

## WHY YOU'LL LOVE IT

- Your work will have a real impact, no filler projects or meaningless tasks.
- Gain hands-on experience building AI systems that are used in production.
- Work closely with our CTO, learning from an experienced professional in the field.
- Be part of a fun, supportive team where learning and creativity are encouraged.
- No need to be an AI expert yet, just bring your passion and we'll help you grow.
- The founding team has more than 15 years of combined AI experience: Simon (CEO) has grown ML6 (international AI agency) from 10 to over 100 people, Lucas (CTO) has an AI patent at ASML and built the internal ChatGPT for DPG Media.
- Be part of a young, dynamic team that's all about building cool stuff and having fun.

## WHAT WE'RE LOOKING FOR

- Basic familiarity with Python, Machine Learning, and general Software Engineering principles.
- Interest in generative AI, LLMs, and their practical applications.
- A desire to learn and contribute to a fast-paced startup environment.
- A proactive mindset and a love for building innovative solutions that make an impact.

Ready to kickstart your career in AI? Join us at Whitespace and help us build the future of marketing.
