

looking for an internship to kickstart your career?

Join the #peopleofdelaware
and help us build the bridge
between business and IT

Who are we?

We are delaware: an IT consultancy company.
We like to bring out the best in technology (and
in people!) to guide our customers through their
business and digital transformations. We truly believe
that **business and technology** go hand in hand.

But more importantly, the #peopleofdelaware
are always up to **celebrate**, share **experiences**,
build **connections**, and make the best **memories**
with colleagues. Feel the buzz of creativity and
collaboration when you walk through our door!

Which delaware domain will you choose for your project?

Technical

- Software Development
- Mobile & Web Development
- Integration
- Data
- Network, Cloud & Infrastructure

... and everything in between

Functional

- Supply Chain & Logistics
- Finance
- Data
- Information Management
- Marketing & Sales
- HR(IS)

... or perhaps you're interested in a mix?

and start your application process today!**

Did you know? In 2021-2022, we welcomed no less than 80 interns. You could be one of them soon.

Software Development

Dynamics Development

In this team, we can offer you backend development projects in X++ (a .NET-like programming language specific for Dynamics 365). For our coding and testing, we also rely on Azure DevOps and cloud features, such as Flow, Power BI, Logic Apps...

SAP Development

Whether you're more into backend, frontend or middleware development, you will always have an opportunity in the SAP Development team. If you are convinced that the Cloud is the next step forward, we offer internships with technologies ranging from RPA, Kyma and AI to classic developments like Java, NodeJS etc. We also offer S/4HANA full-stack developments with ABAP (a proprietary programming language), UI5 (a JavaScript framework) and RAP for more classic implementations.

Mobile & Web Development

From developing web platforms to XR, IoT & applications, there's always a solution within delaware. More into backend, fullstack or frontend? No worries, we've got it all! From a technical point of view, we use .NET (C#), .NET Core, JavaScript (Angular, React), TypeScript, Unity, Power Apps, Mendix, Java Springstack...

Integration

Business exists out of a lot of different units (sales, finance, production, IT, logistics, procurement...) that are often small islands within a company. We make sure these different islands are connected via CPI layers, for example. Of course, these integrations need to be performant and stable for which we use different monitoring tools. We work with both Microsoft (Azure, BizTalk) and SAP (S/4/HANA) software.

Data

Our projects range from data engineering to data science & analytics and everything in between. We work with both Microsoft (Azure, Databricks, Power BI) and SAP (S/4HANA) technologies. Interested to know what ETL or DPT stand for? Look no further!

Network, Cloud & Infrastructure

For internships, the project topics can range from infrastructure to networking, DevOps, automation, AD, cloud & security. We work both in Microsoft (Azure) and SAP (BTP, S/4/HANA) environments. Some other technologies are Ansible, Terraform, Bicep...

Supply Chain & Logistics

We cover all the functional expertise in implementing end-to-end supply chain solutions for SAP as well as Microsoft Dynamics for the following processes:

- Supply chain planning
- Warehousing
- Sales & procurement
- Production
- Plant Maintenance

Finance

Our Finance & Business Controlling domain supports our customers in developing their CFO office of the future. We specialize in both SAP and Dynamics software for all finance & accounting processes of our client. Topics include:

- ERP implementations
- Business controlling
- Compliance

Data

Our projects range from data engineering to data science & analytics and everything in between. We work with both Microsoft (Azure, Databricks, Power BI) and SAP (S/4HANA) technologies. Interested to know what ETL or DPT stand for? Look no further!

Information Management

Companies and employees can work more smartly and more efficiently and can also perform better, when all the structured and unstructured information is unlocked, intelligently managed and made available internally. We use OpenText software and subjects can include:

- Enterprise content management
- Information architecture

Marketing & Sales

Our Digital domain continuously invests in improving customer engagement and omnichannel competences. As a result, we use both Dynamics, SAP, and Salesforce software in the following contexts:

- CRM systems
- Web shops & customer experience websites
- Design & UX
- Digital marketing

HRIS

Our People domain focuses on bringing added value to HR departments, managers, and employees, with the goal to lift employee experiences and boost organizations' performances. This can be related to guiding and implementing solutions, such as:

- Learning management systems
- Performance and feedback systems;
- The full employee cycle, going from employer branding & recruitment to payroll;
- Collaboration tools such as Teams, Sharepoint, Power Apps...
